

Canna Honey Extract 1250mg

Brand: EQ Wellness CBD
Product Code: Canna Honey Extract 1250mg

Price: \$0.00

5 or more \$20.00

Short Description

Canna Honey 1250mg

Cannabis-infused honey ("cannahoney") and simple syrups offer alternative ways to consume cannabis, combining its potential benefits with the sweetness and versatility of these common ingredients. These infusions can provide a variety of effects depending on whether they're made with CBD or THC-rich cannabis.

\$25 per bottle, Buy 5 or more and the Price will be \$20 per bottle

Description

Canna Honey 1250mg

Cannabis-infused honey ("cannahoney") and simple syrups offer alternative ways to consume cannabis, combining its potential benefits with the sweetness and versatility of these common ingredients. These infusions can provide a variety of effects depending on whether they're made with CBD or THC-rich cannabis.

What is cannahoney and cannabis syrup?

- **Cannahoney:** This involves infusing honey with cannabis, typically through methods like emulsifying cannabis-infused oil into honey or mixing decarboxylated cannabis with honey and applying low heat for infusion.
- **Cannabis Syrup:** This refers to simple syrup (sugar and water) infused with

cannabis, according to Potency. Some recipes also incorporate ingredients like vegetable glycerin or coconut oil to aid in cannabinoid absorption and create a smoother texture.

Benefits and uses

Both cannahoney and cannabis syrups can be used as alternatives to traditional edibles, offering potential benefits such as:

- **Pain and inflammation relief:** Cannabinoids in cannabis, particularly THC and CBD, can interact with the body's endocannabinoid system to help manage pain and inflammation.
- **Anxiety and stress reduction:** CBD in particular is noted for its potential to reduce anxiety and stress, while THC can induce relaxation and euphoria.
- **Improved sleep:** The relaxing properties of cannabis may aid in promoting restful sleep.
- **Antioxidant properties:** Both honey and cannabis contain antioxidants, which may help combat oxidative stress and potentially offer protective benefits against chronic diseases.
- **Versatility in consumption:** Cannahoney and cannabis syrups can be added to various foods and beverages, used in cooking and baking, or even applied topically for potential localized pain relief, says California Street Cannabis.
