Price: $0.00

Short Description
House Blend - 76%

A "House Blend" in cannabis refers to a product created by mixing various popular strains, often designed to offer a unique and enjoyable high or cater to experienced users. These blends can be found in various forms, such as pre-rolls, concentrates, or edibles.

THC Content of 76%

Description
House Blend - 76%

A "House Blend" in cannabis refers to a product created by mixing various popular strains, often designed to offer a unique and enjoyable high or cater to experienced users. These blends can be found in various forms, such as pre-rolls, concentrates, or edibles.

At 76% THC, a cannabis House Blend would be considered a very potent concentrate or pre-roll, likely appealing to seasoned cannabis users due to its high concentration of tetrahydrocannabinol (THC).

What to expect with 76% THC in a House Blend

- Potency: Marijuana concentrates, including those described as "House Blends" or infused pre-rolls, generally range from 60-90% THC, with some strains going

even higher. A 76% THC level would place it within the higher range of these products.

- Effects: The high THC concentration means you'll likely experience the effects faster and more intensely, according to Codes Dispensary. Users may report euphoria, heightened sensory perception, and relaxation, or potentially anxiety and paranoia, particularly those with a lower tolerance. The specific effects will be influenced by the terpene profile and blend of strains used in the product.
- Consumption methods: 76% THC can be found in different products. Pre-rolls are a convenient way to consume the blend. Wax or budder forms of a House Blend, with THC levels between 60% and 80%, may be more suitable for those newer to concentrates, while shatter or live resin with THC levels above 80% are likely for experienced users.
- Potential Risks: High-potency cannabis products are associated with increased risks, including dependence, anxiety, paranoia, and potentially psychosis in susceptible individuals or heavy users, notes St. Mary's Pylesville. The long-term effects of using high-THC concentrates are not yet fully known. If you're a novice user or have a low tolerance, it's advisable to approach such products with caution.
